ABSTRACT

According to WHO About 347 million people worldwide have diabetes, and is predicted to become the seventh leading cause of death in the world by the year 2030. According to Diabetes Atlas 2012, released by International Diabetes Federation’ India has 63 million people living with diabetes and is only second to China. By 2030, India's diabetes burden is expected to cross the 100 million mark as against 87 million earlier estimated. Many oral hypoglycemic agents, such as biguanides and sulfonylurea are available along with insulin for the treatment of diabetes mellitus but they have significant side effects and sometimes they are found to be ineffective in chronic diabetic patients. Since ancient times, diabetes has been treated orally with several medicinal plants or their extracts. Phytochemical study shows the presences of flavonoids and sterols in Cynodon dactylon(Doob Grass) which exhibit hypoglycemic activity and are also known for their ability of beta cell regeneration of pancreas. Sterols have also shown to decrease blood sugar in experimental animal models.

Keyword: diabetes, hypoglycaemic drugs, cynodon dactylon.

INTRODUCTION

Cynodon Dactylon (Doob grass)1 is the sacred grass next to Ocimum sanctum(tulsi) because it is used to feed the cows which are sacred in India. The Sanskrit name of Doob is durva means which is cut or eaten by the animal. The plants sacred to lord Sankara, Ganesa and Visnu are vilva, durva and tulsi, which alleviate vata, pitta and kapha dosas, respectively. Hindus worship the God Ganesa with the leaves durva religiously. This plant has been recognised for its cooling, haemostatic, diuretic, and tonic properties since ancient times, cited in Dhanvantari, Kriyadeva and Raja Nighantu. Ayurvedic texts mention two types of durva viz. white and green.According to Ayurveda, India's traditional pharmacopoeia, Cynodon plant is pungent, bitter, fragrant, heating, appetizer, vulnerary, anthelmintic, antipyretic, alexicritic. It destroys foulness of breath, useful in leucoderma, bronchitis, piles, asthma, tumors, and enlargement of the spleen. In Homoeopathic systems of medicine, it is used to treat all types of bleeding and skin troubles. Doob grass originally came from the savannas of Africa and is the common name for all the East African species of Cynodon. It is called bermuda grass in the United States because it was introduced from the Bermuda Island. In ancient Roman days they squeezed the juice from the stems and used it as a diuretic and astringent to stop bleeding.

Detail of plant

Botanical name: Cynodon Dactylon
Family: Poaceae
Genus: Cynodon N
Species: Dactylon

Synonyms: Durva grass, Bermuda grass, Dog’s Tooth grass,
Indian Doab, Scutch grass, Bahama grass, Devil’s grass, Couch grass,Hariyali Grass.

Hindi: Doob
Sanskrit: Durva

HABITAT- Doob Grass is found throughout the world. It is grow in warm climates between 30° south and 30° north latitude.

MORPHOLOGY- Doob grass is a creeping grass, light green in color and has a coarse texture. It has three parts i.e root, stem and leaves. It is fast growing and its root grows where ever a node touches the ground, forming a dense mat. It also reproduces from roots under the ground. It has a deep root system, in drought situations the root system can grow 47 to 59 inches (120-150 cm) deep. Most of the root mass lies 24 inches (60 cm) under the surface. Its blades are a gray-green color and are short, usually 1 to 4 inches (3-10 cm) long with rough edges. The erect stems can grow 0.3 to 1.3 feet (0.1-0.4 m) tall. The stems are slightly flattened, and an inflorescent purple in color. It has no odour and has a sweet mucilaginous taste.

Chemical composition of Doob Grass:
It contains essential oil triticin 12.4%. The other chemical constituents are glycosides, saponins, tannins, flavonoids and carbohydrates. It also contains agropyrene, arunodin, furfural, furfural alcohol, sβ-ionone, 2-(4′hydroxy phenyl) propionic acid, 2-(3′methoxy-4′hydroxy-phenyl) propionic acid, 3-methoxy-4-hydroxy benzoic acid, phytoil, β-sitosterol-D-glucoside, stigmasterol acetate, phago - stimulant phytone (6,10-14-trimethyl pentadecane-2-one). Cuticular wax contains triacontane, docosanol, tetracosanol, hexacosanol, octacosanol, eicosanacid & docosanoic acid. 7,8

Part Used- Whole plant and its root stalk is used for medicinal purpose. 9

TRADITIONAL USES

Cynodon dactylon is used as a folk remedy for diarrhea, bronchitis, anasarca, calculus, dropsy, hemorrhage, urogenital disorders, cough, headache, sores, cancer, carbuncles, convulsions, cramps, cystitis, dysentery, epilepsy, hemorrhoids, leucoderma, hypertension, hysteria, asthma, tumors, measles, rubella, snakebite, stones, tumors, warts, wounds, eye disorders weak vision and Dandruff. It is also useful against pains, inflammations, toothache and grippe in children. The expressed juice of the plant act as astringent and is applied to bleeding cuts and wounds to stop bleeding. The paste made of the plant plant is useful in the treatment of menorrhagia. Local application in the form of paste of the plant extract on the lower abdomen reduces severe bleeding in vagina. A decoction of Cynodon dactylon mixed with sugar is useful in the problem of urine retention. 10,11,12

Pharmacological action of C. dactylon

Part/Extract: Biological Action
Rhizome Extract: Anti Inflammatory 13
Hydro Alcoholic: Cardio Protective 14
Aqueous: Anti Diabetic 15
Aqueous- Non polysaccharide fraction Anti Diabetic 16
Ethanolic: Anti Diabetic 17
Hydro Alcoholic: Anti Arrhythmic 18
Rhizome: Diuretic 19
Aqueous: Antioxidant 20
Shoot: Immunomodulatory &DNA Protective 21
Ariel Part: CNS 22
Aqueous: Chemo preventive 20
Aqueous: Cytotype-specific 21
Hydroalcoholic: Protection from ionizing Radiation cytogenetic damage 24
50% Aqueous-Ethanolic Extract: Nephrolithiasis (Kidney stone Removal) 25
Decoction: Nephrolithiasis 26

Anti-diabetic activity

Santosh kumar and coworkers (2009) evaluated the anti diabetic activity of aqueous extract of Cynodon dactylon at the doses of 250, 500 and 1000 mg/kg body weight. The dose of 500 mg/kg was identified as the most effective dose. It lowers blood glucose level around 31% after 4 h of administration in normal rats. The same dose of 500 mg/kg produced a fall of 23% in blood glucose level within 1 h during glucose tolerance test (GTT) of mild diabetic rats. This dose has almost similar effect as that of standard drug tolbutamide (250 mg/kg bw). Severely diabetic rats were also treated daily with 500 mg/kg bw for 14 days and a significant reduction of 59% was observed in fasting blood glucose level. A reduction in the urine sugar level and increase in body weight of severe diabetic rats were additional corroborating factors for its antidiabetic potential. Total cholesterol (TC), low density lipoprotein (LDL) and triglyceride (TG) levels were decreased by 35, 77 and 29%, respectively, in severely diabetic rats whereas, cardioprotective, high density lipoprotein (HDL) was increased by 18%. The findings clearly indicate that aqueous extract of Cynodon dactylon has significant anti diabetic potential along with significant hypoglycemnic and hypolipidemic effects. 15

Jarald E.E and costaffs (2008) found that the aqueous extract of C. dactylon Pers. and the non polysaccharide fraction of aqueous extract were found to exhibit significant anti hyperglycaemic activity and only the non polysaccharide fraction was found to produce hypoglycemia in fasted normal rats. Treatment of diabetic rats with aqueous extract and non polysaccharide fraction of the plant decreased the elevated biochemical parameters, glucose, urea, creatinine, serum cholesterol, serum triglyceride, high density lipoprotein, low density lipoprotein, haemoglobin and glycosylated haemoglobin significantly. Comparatively, the non polysaccharide fraction of aqueous extract was found to be more effective than the aqueous extract. 16

N. Mahesh and D. Brahatheeswaran,(2007) found that When aqueous and ethanolic extract of Cynodon dactylon was administered to glucose loaded normal rats fasted for 18 h, hypoglycemia was observed after 30 min. The decline in blood sugar level reached its maximum at 2 hour. 27

Other pharmacological action

1. Cardio protective activity

Garjani. A. and the costaffs (2009) evaluated the rhizomes of Cynodon dactylon were used for the treatment of heart failure in folk medicine. C. dactylon exerted a strong protective effect on right heart failure, in part by positive inotropic action and improving cardiac functions. 14

2. Anti-arrhythmic activity

Najafi. M. alongwith Gajrani A.(2008) investigated probable antiarrhythmic effects of C. dactylon against ischemic/reperfusion (I/R)-induced arrhythmias in isolated rat. 18

3. Anti-inflammatory activity
Cynodon dactylon is one of the 10 auspicious herbs that constitute the group Dasapushpam in Ayurveda. Traditionally Cynodon dactylon L. is used against many chronic inflammatory diseases in India. 28,29

4. Wound Healing:
Druva gritha was evaluated by charde for wound healing property by incision and excision wound model in male wister rat promotes wound contraction and reduces the time for closure showing healing potential comparable to Framycetin sulphate 1% cream.30

5. Antidiarrheal:
In an investigation hexane, dichloromethane, ethyl acetate and methanol extracts of Cynodon dactylon whole plant were tested in albino rats for antidiarrheal activity on castor oil induced diarrhea.31 Methanolic extract exhibited considerable reduction in inhibition of castor oil induced diarrhea and also showed a significant decrease in gastrointestinal motility. These results indicate that the plant possess good antidiarrheal property.

6. Antiviral:
Cynodon dactylon exhibited potent antiviral activity against white spot syndrome virus (WSSV) and they have also been reported to possess antiviral activity against human vaccinia virus.32

7. Antiulcer:
Alcoholic extract of Cynodon dactylon was screened for antiulcer activity in albino rats at dose level of 200, 400 and 600 mg kg”1 b.wt. The extract at 400 mg kg”1 and 600 mg kg”1 showed significant (>0.001) antiulcer activity as compared to the standard drug, ranitidine. This activity may be due to the presence of flavonoids.33

8. Diuretic activity
Plants extract increased significantly urinary output and electrolytes excretion at the dose of 0.500 g/kg for C. dactylon. Aqueous herb extracts particularly, at the dose of 0.500 g/kg induce significant effect on urinary output of water and electrolytes and justify their use as diuretic remedy in traditional medicine. 39

9. Central Nervous System related activity
The dried extracts of aerial parts of Cynodon dactylon Pers. were evaluated for CNS activities in mice. The ethanol extract of aerial parts of C. dactylon (EECD) was found to cause significant depression in general behavioral profiles in mice.22

10. Immunomodulatory activity
Mangathayru K. and coworkers investigated the freshly prepared juice of Cynodon dactylon for its effect on doxorubicin-induced DNA damage in vitro and its immunomodulatory activity. Oral administration of the juice at 250 and 500 mg/kg in mice increased humoral antibody response upon antigen challenge, as evidenced by a dose-dependent, statistically significant increase in antibody titer in the haemaggulination antibody assay and plaque forming cell assay. 21

11. Antioxidant activity
The antioxidant, antiproliferative and apoptotic potentials of the plant were investigated by 1,1-diphenyl-2-picrylhydrazyl (DPPH) assay, nitric oxide radical scavenging activity (NO(-)) and MTT assay on four cancer cell lines (COLO 320 DM, MCH-7, AGS, A549) and a normal cell line (VERO). 20

12. Chemopreventive activity
Albert-Baskar A. evaluated in vivo chemo -preventive property of the plant extract of Cynodon dactylon in DMH-induced colon carcinogenesis. The methanolic extract of C. dactylon was found to be antiproliferative and antioxidant at lower concentrations and induced apoptotic cell death in COLO 320 DM cells. Methanolic extract of C. dactylon increased the levels of antioxidant enzymes and reduced the number of dysplastic crypts in DMH-induced colon of albino rats. 20

13. Anti-nephrolithiasis activity
Aqueous-ethanolic extract of Cynodon dactylon can reduce calcium oxalate stones in the rat kidney by 40 and 55% respectively. It has beneficial effects on kidney stone removal and might be used in human beings. 25

Atmani. F. and coworkers evaluated the effect of Cynodon aqueous extract as a preventive and curative agent in experimentally induced nephrolithiasis.26

SUMMARY AND CONCLUSION
As the diabetes has become a global burden and long term management with available pharmacological therapy is gradually getting costlier, sometime ineffective as well as associated with side effects, it is desirable to explore the kinetics and action of herbal medicines like cynodon dactylon etc., for safe and effective management of diabetes. As researches shows the hypoglycaemic action of cynodon dactylon is due to presence of flavinoid and sterols which regenerate beta cell of pancreas ,it might be very useful in treatment of diabetes. Beside hypoglycaemic action it also has antioxidant action which has additive effect in treatment of diabetes. As the Doob Grass is easily available, abundant in our region, very economical and easily recognisable, it is feasible to conduct the experimental work and results obtained would be very helpful for designing the large clinical trials before applying the results for the management of diabetic population.
